LABSHEET-04

Q1. Display the current logged-in username, UID, primary GID and supplementary groups.

```
id
```

Q2. Display the account entry of a test user from /etc/passwd and identify the fields stored in the entry.

```
grep '^labuser1' /etc/passwd
```

Q3. Display the password/account status of a test user without displaying the actual password.

```
sudo passwd -S labuser1
```

Q4. Create a new user named labuser1 using useradd and verify that the account has been created.

```
sudo useradd labuser1
grep '^labuser1' /etc/passwd
```

Q5. Create labuser2 with a home directory and verify the home directory and its ownership.

```
sudo useradd -m labuser2
ls -ld /home/labuser2
```

Q6. Create labuser3 with /bin/bash as the login shell and verify the assigned shell.

```
sudo useradd -s /bin/bash labuser3
grep '^labuser3' /etc/passwd
```

Q7. Set a password for labuser1 and verify the password/account status.

```
sudo passwd labuser1
sudo passwd -S labuser1
```

Q8. Change the password of labuser1 and verify the account status again.

```
sudo passwd labuser1
sudo passwd -S labuser1
```

Q9. Use usermod to change labuser2's login shell to /bin/bash and verify the change.

```
sudo usermod -s /bin/bash labuser2
grep '^labuser2' /etc/passwd
```

Q10. Use usermod to change labuser2's home directory, first without moving the existing contents and then with the option that moves the contents.

```
# Without moving contents
sudo usermod -d /home/labuser2_new labuser2

# With moving contents
sudo usermod -m -d /home/labuser2_new labuser2
```

Q11. Create a supplementary group named userlabgroup and add labuser1 to it using usermod. Verify the membership.

```
sudo groupadd userlabgroup
```

```
sudo usermod -aG userlabgroup labuser1
id labuser1
```

Q12. Lock labuser3 and verify that the account is locked. Then unlock it and verify the result.

```
# Lock account
sudo passwd -l labuser3
sudo passwd -S labuser3

# Unlock account
sudo passwd -u labuser3
sudo passwd -S labuser3
```

Q13. Display detailed password-aging information for labuser3 using chage.

```
sudo chage -l labuser3
```

Q14. Set an account expiration date for labuser3 and verify the expiration information.

```
sudo chage -E 2026-12-31 labuser3
sudo chage -l labuser3
```

Q15. Modify labuser1 so that a specified existing group becomes the user's primary group. Verify the result.

```
sudo usermod -g userlabgroup labuser1
id labuser1
```

Q16. Display the users and groups associated with a selected account using id, groups and getent.

```
id labuser1
groups labuser1
getent passwd labuser1
```

Q17. Delete labuser1 without removing its home directory. Verify the account entry and home directory separately.

```
sudo userdel labuser1
grep '^labuser1' /etc/passwd
ls -ld /home/labuser1
```

Q18. Delete labuser2 and remove its home directory using the appropriate userdel option. Verify the result.

```
sudo userdel -r labuser2
grep '^labuser2' /etc/passwd
ls -ld /home/labuser2
```

Q19. Create a complete user-management workflow: create a user, set a password, assign a shell, add a supplementary group, lock/unlock the account and verify all settings.

```
sudo useradd -m -s /bin/bash demo_user
sudo passwd demo_user
sudo groupadd demo_group
sudo usermod -aG demo_group demo_user
sudo passwd -l demo_user
sudo passwd -u demo_user
```

```
id demo_user
```

Q20. Clean up all test users and lab-only groups created during this lab. Verify that no unintended system account has been modified.

```
sudo userdel -r labuser3 2>/dev/null
sudo userdel -r demo_user 2>/dev/null
sudo groupdel userlabgroup 2>/dev/null
sudo groupdel demo_group 2>/dev/null
```
